Brief Introduction of Action Plan for Global Youth Development

In June 2022, Chinese President Xi Jinping announced at the High-level Dialogue on Global Development that “China would hold the World Youth Development Forum and jointly initiate the Action Plan for Global Youth Development, in a campaign to pool as much strength as possible for the implementation of the 2030 Agenda for Sustainable Development.” In July 2022, the inaugural World Youth Development Forum was held, where young representatives from different countries jointly released the “International Advocacy for Prioritizing Youth Development,” advocating for the implementation of the Action Plan for Global Youth Development.

The Action Plan for Global Youth Development, also known as the “Action Plan,” aims to serve as a showcase platform for best practices, an international community for young pioneers, and a boost for international youth movements to implement the United Nations 2030 Agenda for Sustainable Development and Global Development Initiatives. By selecting and promoting the excellence actions that contribute to global development and youth development and empowering youth leaders with training projects, it seeks to strengthen cooperation among the youth, actively lead the international youth action, and pool the wisdom and strength of youth in building a global community of shared future.

Starting from October 2022, the All-China Youth Federation and the Organizing Committee of the World Youth Development Forum, in cooperation with various United Nations agencies and youth organizations around the world, have worked together on the seven priority areas: poverty elimination, zero hunger and food security, future-oriented digital technology, climate action and green development, inclusive and equitable quality education, health and well-being of youth, and youth employment and entrepreneurship. 100 Excellence Actions (2023) for Global Youth Development was selected worldwide, covering 43 countries across six continents. The implementation of these programs involves a wide range of entities, including youth organizations, social enterprises, media, think tanks, and universities. The average age of the youth leaders of these programs is 29 years old.

“Prevention is better than cure”

The dirty public toilets are daunting. More and more women work outside the home and have to use public toilets. Due to the characteristics of women's physiological structure, the use of unclean public toilets is more likely to lead to diseases such as urinary tract infections.

Targeting this problem for women, this program uses nanotechnology to design a spray that can be sprayed on public toilets to create a protective layer and inhibit the growth of microorganisms, thereby protecting users. At the same time, it also makes toilets easier to keep clean, and the water saving rate is up to 55%. The program began in Mumbai, India, a few years ago and will be replicated in 90 cities across the country.

The program has partnered with comic studios to design posters in public lavatories across India to educate about female hygiene and disease prevention. As a PhD in microbiology, the founder believes that "prevention is better than cure".
